- Sending Email
- What is xml
- How to read XML document
- Handling Images in Binary Format

▪ **Expert Coaching On MySQL Database**

- How to connect with MYSQL database
- Insertion, Updation and Deletion through Form
- Learn How to search in mysql query
- How to Apply PHP security by MySQL Login
- Getting Data in Tabular Format
- Managing Select tag state on Refresh
- Getting Dynamic results on Event
- Advance SQL Search
- Learn MySQL Query with Table JOINS and UNIONS
- Handling MySQL Operators and where clauses
- DHTML Menu

• How PHP Embed Java Script

- What is Java Script
- Java Script Document Object
- Accessing Form Objects
- Programming with JavaScript Arrays
- Validating Forms through Java Script
- Controlling CSS through JavaScript at run time

• PHP-AJAX Communication

- Check ID Availability using AJAX
- AJAX handling HttpRequest and Response
- Database Interaction using AJAX

• A Step To Advance Scripting

- Paging through Database
- Handling Stored Procedures
- What is SQL Injection
- How to prevent SQL Injection
- How to Play Video files
- Play MP3 files
- Connectivity with Microsoft Excel
- Introduction to XML Document
- How PHP call Web Services

MVC ZEND Framework Course Contents

- Zend Folder Structure
- Learn Anatomy of Zend Framework Application
- Index.php as Single Access File
- Apache .htaccess
- **How MVC Controllers Works**
- Views
- **Zend Framework Action**
- Learn Dynamic Content
- URL Structure and Controller
- URL Structure and Action
- GET Parameters
- Header and Footer
- **Database Interection**
- Database Intro
- Input Form
- Inputing Data to Database

- Learn Inserting Expressions to a table
- List of Data
- making Editing Form
- Updating Data
- Use Update Query From Zend Framework
- Deleteing data
- Delete Query Style

CAKE PHP Framework With Examples

- Understanding MVC Architecture by making CakePHP App.
- Learn writing Controllers and views using Models
- data communication between them
- Passing data php controllers to PHP View page
- Listing data in grid format
- Sending parameters from view to controller
- How to Change Web Design of Layout
- Learn cakephp Theme Creation
- Creating cakePHP Actions
- Database Interaction in CakePHP MVC using Models & MySQL.
- Registering data by helper classes
- Database Edit and delete Operations using cakephp helper classes
- Complete crud cycle using MVC framework Concepts

Joomla , working with Joomla , Creating articles, categories,menus,media

Wordpress CMS Classes

- Improve your CMS skill & knowledge by Developing Wordpress Plugin and wordpress theme
- Creating Pages and Managing Post
